

Does artificial vintaging improve on using actual recent-season training reports?

Each point retrains the model on 2022-23/2023-24/2024-25; finalized future labels unchanged. Artificial errors use only 2024-25 archived/final pairs. Evaluation: 2025-26 Wednesday reports, B2 source lags, frozen-final proxies where archives are absent. Same three seeds on L40; development comparison. C2 covariates: inpatient, wastewater, Kinsa, ILINet, clinical labs and FluSurv. Admission targets have twice ED weight; US20%, states/DC80%.
