

Change in relative WIS versus the same architecture: Finalized training inputs
 Three seeds per cell and control; negative is better. All labels finalized; source lags and final-value archive proxies retained.

Evaluate 2024-2025 Wednesday reports: flu + COVID admissions
 Train on 2022-23, 2023-24, 2025-26; errors from 2025-26

Evaluate 2025-2026 Wednesday reports: all six targets
 Train on 2022-23, 2023-24, 2024-25; errors from 2024-25

Early two = 2022-23 and 2023-24; recent = permitted donor season shown above.

C1: pathogen MLP, distance sharing, no covariates. C2: target MLP, no spatial sharing; inpatient, wastewater, Kinsa, ILINet, clinical labs, FluSurv.
 C3: target MLP, neighbor sharing, Kinsa. All learn finalized t+1..t+4 labels.
